GRAND CHAMPION STEER at the Solanco Fair Thursday is shown by John Enck. The Hereford 4-H steer named "Billy" weighed 910 pounds L F Photo

Hereford 4-H Steer Named "Billy" Takes Fair Show

A meaty, Colorado bred 4-H Hereford named "Billy" walked away with the championship at the Solanco Fair Steer Show Thursday for John Enck, son of Mr and Mrs Richard Enck, Holtwood R1 The steer weighing 910 pounds was first in the heavyweight breed class and won the breed championship

Reserve champion of the show was the champion Angus shown by Shirley Craig, Nottingham R2 Shirley's steer weighed 900 pounds and was the first place in the heavyweight Angus class

Shirley Landis had the reserve champion Hereford with the first place lightweight steer and Don Dorwart had the reserve champion Angus following Enck in the heavyweight class.

The top Shorthorn was shown by John Martin and Ken Dearolf had the top Charolais

In the fitting contest, Carol Walter was first in the younger contestants and Judy Thompson was top in the older youth class.

Ed Weidman was first in the youngers member's showmanship contest and Kay Weaver was named the best showman in the older youth group

The winning placings are as follows

ANGUS

Lightweight, Jim Thompson; Fred Edwards, Joe Shank, Bar-

Poultry Tour Reminder

Another reminder on the Lancaster County Poultry Tour scheduled to go to the NEPPCO Show at Atlantic City was given by chairman John Hess this week

The one day trip will leave the Farm and Home Center Parking lot on October 15 at 6 30 a m. and return the same night. Cost for this trip is $10 which includes transportation and the Expo Registration

A two-day tour will also leave at the same time and stay over the next day Cost for the two-day tour is $38 per person and this includes transportation, hotel room with two persons per room, Expo registration, tips, Luncheon, etc

Hess said reservations must be made by October 1 to Mrs Paul McGarvey, 379 W Roseville Road, Lancaster or call 397-1543.

Randy Ranck's Hogs Top Solanco Show

A sixth grade student at the *Swift Junior High School took home the grand champion* rosette and trophy for having the best pair of fat hogs at the Solanco Fair Thursday

Randy Ranck, 11-year-old son of Mr and Mrs Lester Ranck, Quarryville R2, won with homebred gilts that were crossbred of Yorkshire, Hampshire and Landrace bloodlines They were the first place medium weight hogs weighing 215 pounds each.

Reserve champion fat hogs were shown by Scott Kreider, son of Mr and Mrs Allen Kreider, Quarryville R1. Scott is an eleventh grade FFA student at Solanco. His Yorkshire

Solanco Fair Dairy Show Has Best Quality Ever

'The best cow classes we ever had' was the way an observer of the Solanco Fair Dairy Show described the event Wednesday afternoon With quality running down the larger-than-usual classes, judge Raymond Seidel, from Richland, chose his first place aged cow shown by Ira Welk, Quarryville R3, as the grand champion of the Holestein show. The milky, four-year-old, Brookside Bond Re Re, was just fresh a few days and Seidel said she "looks like she is going to work"

Reserve champion honors and grand champion of the Junior Holstein Show was Groffdale Marquis Jill, an upstanding, black, two-year old cow for Carol Groff, Quarryville R3 Miss Groff's sister Sharon had the reserve junior champion

In the Guernsey show, the Fred Crider family took home a fist full of ribbons, winning first place in every class except two where they had no entries

Debra, 11, topped the family affair with her junior yearling, beating her brother Allen 13, for the championship Showing his four-year-old cow, Allen took the reserve championship and the best udder class. Ricky, 10, started the day off for the family with a first place winner in the Junior Calf Class Allen also showed the first place senior calf and Diane, 12, had the two-year-old cow

Evanglist Trismas Marine, the first place two-year-old in the Jersey Show was the grand champion for Roger Shaub, Quarryville R1, and Tom Aaron, Quarryville R1 had the champion in the Junior Division with Epic Springbrook Valerie Aaron also had both reserve champion animals

Lampeter, Ephrata And Harrisburg Have Events Next Week

A full schedule of events are set to occupy county farmers next week as two local fairs, and state national dairy events take the stage

NOTICE: Lancaster Farming will have a booth at Lampeter Fair next week with photographs of the 1968 Fair and a Mystery Farm Contest. Visitors to the booth are invited to try for the $25 cash prize.

For the local farm youth, it's the State Junior Dairy Show in Harrisburg starting off on Mon-

(Continued on Page 5)

Rural Youth Awards Made

To encourage participation of Youth of southern Lancaster County in the Solanco Fair, a special Rural Youth Contest is held each year in which the youth having the highest score is awarded special prizes. Any boy or girl may enter any department, division or class of the Fair and he or she is awarded points according to number of entries and placing in the class when judged.

Winners this year were named as follows and were scheduled to receive their prizes Friday night at the Fair

BOYS

1 Scott Kreider, 2, William Hershey; 3, Scott Mull, 4, Tom Aaron, 5, David Witmer, 6, Ken Dearolf; 7, Robert Young, 8, Matt Young

GIRLS

1. Esther Herr; 2, Pat Reinhart; 3, Jean Redcay, 4, Cindy Baughman

NEBA To Hold Open House

Northeastern Breeders Association, (NEBA) of Tunkhannock, Pa will open its doors to members and guests during the period October 3-5 Highlight of the 3-day event will be a chicken barbecue scheduled for Saturday, October 4

During Open House at NEBA, you will have the opportunity to see your favorite NEBA sires, the new barns and laboratory, and the recently remodeled office facilities. Staff members will be on hand to answer questions.

Special significance is given to this year's Open House by the forthcoming Federation of NEBA with the Maryland and West Virginia Breeding Cooperatives This new Federation, due to become effective on October 1, finds the NEBA facilities playing a key role It is hoped that a number of the Maryland-West Virginia sires will have been moved here by Open House time

Both farm and non-farm people are invited to attend the NEBA Open House In fact, on Friday Evening, October 3, from 5 8 p m, NEBA extends a special invitation to all farmers.

Those wishing to attend the October 4 barbecue must purchase or reserve tickets on or before September 27. They are available from NEBA technicians or at the NEBA office in Tunkhannock.

ORTHO

Paraquat

REVOLUTIONARY, ORGANIC-ACTION VINE KILLER REDUCES POTATO HARVEST WORK AND HAZARDS

Ortho Paraquat Offers Unique Advantages

As A Potato Harvest Aid:—

- This new, organic herbicide quickly desiccates vines and weeds by disrupting the plant's photosynthetic process — fast kill
- Paraquat contains no sodium arsenite — reduces common hazards associated with potato vine desiccation before and after harvest.
- Paraquat is chemically neutralized on contact with soil. — Leaves no residues in the soil to harm subsequent crops.
- Does not affect germination, sprouting, growth, quality or flavor of tubers — no harmful side affects.
- Paraquat does not contain salts which appeal to animals. Does not attract livestock grazing in nearby fields.
- Keeps maintenance costs of existing application equipment minimal. ORTHO Paraquat is water soluble and is not corrosive when used properly.
- A single, moderate application with water gives excellent potato vine kill — effective.
- For increased effectiveness add X-77 spray sticker.

From Where We Stand...

Problems Seem A Little Less

What will anthropologists of the future think when their "digs" unearth tons of cans, cars, bottles and tires of the current generation? According to Richard D. Vaughan, director of the Bureau of Solid Waste Management of the U.S. Public Health Service, "in 1920 an average of 2.75 pounds of waste was collected daily from each person in the U.S. Today, this figure has grown to 5.3 pounds, and it is estimated that by 1980, the per capita waste collection will be eight pounds a day. From New York to San Francisco, cities are running out of disposal space. One year's rubbish from 10,000 people covers an acre of ground seven feet deep. . ."

It has been estimated that Americans, in a typical year, throw away 48 billion cans, 26 billion bottles, more than 30 million tons of paper, four million tons of plastics, and 100 million rubber tires weighing a million tons. Also, it is estimated that by 1980, Americans will be discarding 10 million vehicles a year. In a similar vein, even though "noise pollution" isn't as dramatic as smog, environmental-health specialists agree that the daily decibel diet of noise constitutes "a physical as well as a psychic hazard."

"A recent survey showed that the average decibel reading for a New York City street corner at rush hour is 95; many medical experts believe that continuous exposure to any count above 85 can cause hearing loss. Moreover, a Federal study has estimated that the environmental din is doubling every 10 years. At that rate, physicist Vern Knudsen has predicted, the down-town areas of the largest U.S. cities will eventually become as deadly as the ancient Chinese noise tortures. . ." One Citizens' anti-noise ad reads: "Noise pollution won't kill you. It can only drive you nuts or make you deaf."

As farmers, we are privileged to have open fields and meadows and maybe even a back wooded thicket on our farms where we can stop the tractor for a few minutes and be alone in the quiet of nature to refresh the body, mind and soul. We have our problems as farmers, that's sure. But when thus alone with our Maker, our problems seem just a little less than the guy's problems who must live on the street corner at rush hour. At least that's the way it looks from where we stand.

Dear Consumer . . .

We know you're concerned about higher prices. We are, too. The wife just bought new shoes, clothes, pencils and notebooks for the back to school crowd. Whew!

But about those meat prices . . . you've been looking for some answers We'll answer first by asking a question. How much more money does your husband make now than he did in 1951? Unless he's a pensioner or unemployed, we'll bet it's no less than 65% more and possibly as much as 150% more. It's none of our business, you might say, and you're right — we really don't mean that you should tell us. We just want you to stop and think about it yourself. Of course, generally speaking, it is our business because it affects our business in two ways:

(1) part of that wage — only about 4½% of it, actually — goes for the purchase of the products of our industry . . . beef, veal, pork, lamb, sausage, etc.

(2) each increase in your husband's salary is reflected in higher prices people in our industry must pay to stay in business and to care for their families.

How much more do you think the husbands of the ladies on the nation's farms and ranches are making today? Once again, it's probably none of your business . . . but in general terms it is your business because it affects what you pay for meat products. You may not believe it — but we've got the figures to prove it — the livestockman is making no more today than he did in 1951. Earlier this year, he finally got back to where he was in the early 1950's insofar as income from sale of his meat animals is concerned. Which means after nearly 20 years he is once again realizing something like a reasonable return on his investments. And even now those prices are moving downward again.

For your sake as well as his, Mrs. Boycotter, we hope those prices don't slide back to where they were. If they do, it's a lead-pipe cinch many livestock producers will give it up and pursue less uncertain endeavors, rather than go through another period of financial drought. If that happens, this industry's record-breaking production of meat products would reverse itself. Beef, pork and lamb would become scarce food items, simply because there wouldn't be that many people willing to take the risk of producing at a loss. And then meat prices would really get high.

If the farmer-rancher isn't getting the big slice of the meat price pie, then who is? Is it the meat packer? With net profits of less than one percent . . . hardly! The meat retailer? Most of what he gets, over what he pays, is devoured by labor and equipment costs. No, he's not the culprit . . . not at his 1-2% profit.

We have read some newspaper accounts quoting you, Mrs. Boycotter, as saying you think the big profits must be going to some "middle-man." You are dead right, ma'am. And do you know who that middleman is? It is inflation! It is the cost of everything, including your husband's wages, that's driving up the cost of everything. Everything!

No one likes to pay more for anything! And when meat prices go up, they are more noticeable because grocery-shopping is a frequent thing, and bless you, meat is a favorite food of yours! But, in the spirit of fair play . . how about taking a look at what you are paying for other goods and services . . . and how much more you have of the good life than you had 20 years ago? Meat is part of that good life . . as one of the more enjoyable necessities You could boycott it right into the luxury category. We don't want that and we don't think you do either

Local Weather Forecast

(From the U. S. Weather Bureau at the Harrisburg State Airport)

The five-day forecast for the period Saturday through next Wednesday calls for temperatures to average near normal with daytime highs in the 70's and over-night lows in the 50's. Cool Saturday with some moderation thereafter and cool again at the end of the period

Rain may total one-half inch or more as showers and thunder showers about Tuesday.

THE BIBLE SPEAKS

Internat onal Uniform Sunday School Lessons

BY LAWRENCE W. ALTHOUSE

THE EDIFACE COMPLEX

Lesson for September 21, 1969

Background Scripture: 2 Samuel 7 1-29; 12.1-23; 1 Kings 1 32-37; 2 1 4, 6 1-38, 8.
Devotional Reading: 1 Kings 8 22 30.

In the reign of King David, worship was one of the most important unifying factors in the nation. Their worship of the one God brought closer together these people of various tribal backgrounds. There are some today who observe that worship in America today often seems to be one of the causes of our national disunity. Even in this day of increasing ecumenism among Christians, we still have difficulty in coming together for common experiences of worship.

Rev. Althouse

We are often like the man who said, "We will each worship God in our own way: you in your way and I in God's way." Perhaps we are too preoccupied with determining which is the "right way" to worship God. This was the very question which the Samaritan woman raised with Jesus at the well. In his answer, Jesus indicated that place and form are always secondary to the spirit and sincerity of the worshipper.

Priorities

King David wanted to build a temple in Jerusalem as a means of unifying his nation under God. But God told him that the temple could come later. A central place of worship did not guarantee a unified people. The place of worship would not be nearly so important as the spirit in which the nation worshipped. This must have disappointed David for, like us, he had somewhat of an "ediface complex." As any churchman knows, it is always easier to raise money for a new church building than for an expanded program. In the new nation of Israel, however, David was to concentrate on program and the temple, he was assured, would come later.

It is natural for us to have our preferences in terms of where and how to worship. Yet, perhaps all of us could afford to give up some of our rigidity on this subject. The experience of John Wesley is instructive for us. He had been born into a religious home, his father an Anglican priest. So John had received a good preparation for the Christian faith. Yet his soul was restless and he was constantly searching for new insights.

"Strangely warmed"

On May 24, 1758, he went to a service of worship in the magnificent St. Paul's Cathedral in London. There was nothing special in this service — its features were dictated by historical Anglican usage — but the closing words of the anthem seemed to speak especially to him:

> **O Israel, hope in the Lord! For with the Lord there is steadfast love, and with him there is plenteous redemption.**
> **And he will redeem Israel from all his iniquities. (Psalms 130:7,8)**

Later that same evening, Wesley attended a meeting of Moravians on Aldersgate Street. He had first come into contact with these German Christians on a voyage to Georgia. He had found that in the midst of the most terrifying storms at sea these people exhibited a remarkable faith in God's providence, singing their hymns with joy while others on the ship cowered in fright.

God's touch

Thus, on the night of May 24, 1738, John Wesley, a priest of the Church of England, sat in a meeting of humble Moravians and while reading Martin Luther's "Preface to the Epistle to the Romans," had a unique spiritual experience. Writing of it in his diary, he said; "At about a quarter before nine . . . I felt my heart strangely warmed. I felt I did trust in Christ — Christ alone for my salvation."

He had found what he was looking for and two entirely different kinds of worship had prepared his heart to receive it. There was for him no one "right way." In the beauty of the Anglican service and the simplicity of the Moravian meeting, he had felt God's touch.

NOW IS THE TIME . . .

By Max Smith
Lancaster County Agent

To Beware Of Frost

The mention of possible frost is already in the weather forecast for the high areas of our state. In a few weeks most of the state will be exposed to lower temperatures and killing frosts. Livestock producers should become acquainted with the results of a killing frost on their forage crops. With the common pasture grasses, it will make little difference; with legumes such as alfalfa or clover frost will not make them poisonous but increases the danger of bloating; with sudan grass or the sudan-sorghum-hybrids there is danger of poisoning when consumed fresh after a frost. Handle crops carefully at frost time.

To Control Millepedes And Beetles

During the late summer and fall a number of nuisance insects may appear around the home; at the moment we have had millepedes and ground beetles; later on we may have clover mites and box-elder bugs, all of these will do little damage but are a nuisance. Control may be attained by spraying several times a week with sevin, chlordane, lindane, or diazinon. No permanent control known at this time; repeated sprays should reduce the problem.

To Handle New Corn Carefully

The corn crop is ripening rapidly and already we notice corn pickers starting to harvest this big crop. No doubt the ears are still high in moisture and to crib the corn in this condition without extra drying with heat or air may result in severe molding. If this new corn is to be fed, it should be ground daily to prevent heating and molding. Those with facilities for storing high-moisture ground ear corn or shelled corn have the advantage of early harvesting at this time of the year. Don't be careless in storing a good corn crop so that it will come out heated and moldy.

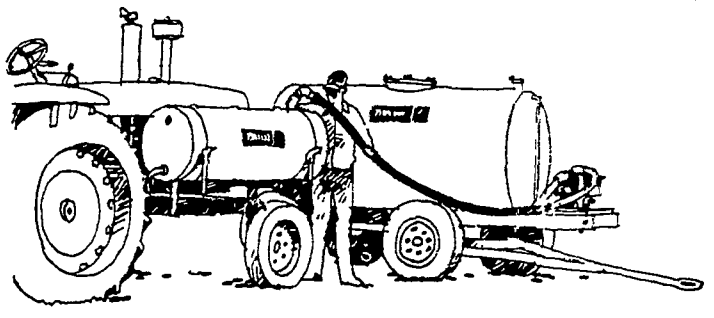
Arcadian Liquid.

Now's the time to seed and feed wheat.



Start wheat faster with exact prescription-analysis in every drop. That's why more growers are converting to Arcadian SLF mixed liquid. It doesn't limit you to five or six grades We prescription-mix N-P-K plus minor elements in the exact ratio your wheat crop needs for strong, vigorous growth It contains new Poly-N® which gives you 100% water soluble phosphorus enriched with new polyphosphates. Gets wheat off to a faster, deep-rooted start. And you also get three forms of nitrogen for fast response plus sustained feeding You'll like the way Arcadian liquid saves labor Loading and applying is far easier and faster than dry materials. All you lift is the end of a hose. So unless you enjoy lifting fertilizer bags, try Arcadian SLF liquid. The faster, labor-saving, more profitable way to seed and feed wheat.

New ASC Community Committees Elected

Results of the September 18th election of community ASC Committeemen for the 16 communities in Lancaster County were announced today by Fred G Seldomridge Chairman of the Lancaster County ASC Committee The election was held by mail and ballots were counted publicly by the County ASC Committee on September 18th in the Lancaster County ASC Office The ASC Community committee chairman, vice chairman and third regular member automatically become delegates to the county convention where farmers are elected to fill vacancies on the county ASC Committee

The alternate committeemen become alternate delegates to the convention The County convention will be held Thursday, September 25th, at 8 00 p m in the downstairs meeting room at the Farm and Home Center

After the County Committeemen are elected the delegates determine which of regular committeemen will serve as committee chairman and vice chairman for the coming year

Elmer L Huber, whose term expires this year, will not be eligible for reelection to the county committee, since he has sold his farm Huber, who has served eleven years on the county committee, was honored at a luncheon by fellow county committeemen and office employees

Food Load Lighter

In the late 1940's it took more than 1,500 pounds of groceries to supply one person with food for a year, according to U.S. Department of Agriculture economists. The load today is about 100 pounds lighter, thanks in part to increased food processing. A can of frozen orange juice weights less than a dozen fresh oranges. Instant products weigh less than the regular products—potatoes for example.

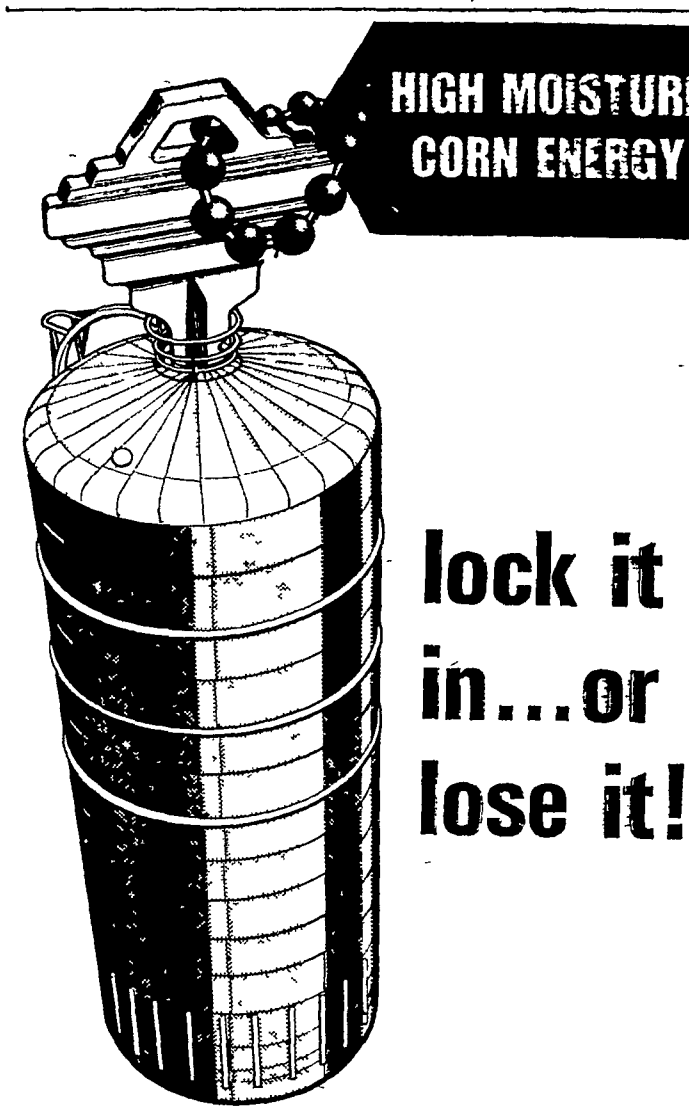
Lancaster Farming Ads Pay



lock it in...or lose it!

Harvest high moisture corn and save three ways. When you harvest corn early, at high moisture, you **harvest it at maximum nutrient content.** The earlier harvesting also **reduces field losses** due to lodging and dropped ears. And **costly drying is eliminated.**

HARVESTORE "locks in" more valuable TDN. The HARVESTORE system of storing and processing saves more of the valuable energy in high moisture grain. This saved TDN can add up to more profitable gains or milk production It's like adding **extra acres** to your crop land.

Many farmers also process cornlage (low-moisture silage) through their HARVESTORE This gives them the feed value of the entire plant The lower moisture level also eliminates hauling and storing unneeded water. Add the labor-saving advantages of HARVESTORE bottom unloading and automated feeding Small wonder so many owners consider **HARVESTORE the key to increased production and profit.**

For details, see or call us today. We'll show you how your neighbors are locking in extra profit with HARVESTORE.

HARVESTORE multiplies manpower and landpower

DALE SPANGLER won the FFA Youth Division in tractor driving Thursday morning at the Solanco Fair. L. F. Photo

DeLong Wins Tractor Drive

George DeLong, a farmer at Peach Bottom, won the adult tractor driving contest at Solanco Fair, Thursday morning and had the best score of all contestants with 30 points. Marvin Herr was second followed by Martin Waltman.

Dale Spangler, ninth grade FFA student at Solanco won the FFA Youth Division with 170 points. It was the first year he tried the contest. Dale is the son of Mr and Mrs Paul Spangler, Quarryville R1.

Second place in the FFA division was Charles Stoner and Herbert Kreider was third.

Glenn Kreider was first in the 4-H class with 225 points. Sixteen entries competed in the contest.

ASCS NEWS

Wheat Allotments

Notices of 1970 wheat allotments were mailed to all Lancaster County farmers on September 3rd, along with an explanation of the 1970 wheat program

Farmers wishing to appeal the 1970 wheat allotment must do so in writing by September 18th

Wheat Program

Basic provisions of the 1970 wheat program are similar to 1969 The program is voluntary, and only those who participate, must comply with allotments

Producers who sign up and qualify, are eligible for

1 Price support loans on all wheat produced

2 Diversion payment for diverting below the allotment

3 Marketing certificate payment on 48 percent of the projected production

Substitution between wheat and feed grain is approved for 1970, if farmer enrolls and participates in both programs To date, it has not been determined if barley will be included in the 1970 feed grain program.

Program requirements are:

1 Enroll during sign-up period, which will be announced later.

2. Divert an acreage equal to 30 3 percent of the allotment.

3. Have an acreage of wheat no larger than the allotment (or permitted acreage, if additional diversion is made, or use is made of substitution or excess wheat provisions).

4 Maintain farm conserving base and put to conserving use the total acreage diverted

5 Keep within wheat allotment or permitted acreage on all other farms in which you have an interest

6 Certify compliance with program and carry out agreement

Farmers who do not plant any wheat or only part of the allotment, may divert acreage for payment Maximum that can be diverted is the larger of 50% of the allotment or the difference between 25 acres and 30 3 percent of the allotment, not to exceed the farm allotment

ASC Elections

Ballots for election of ASC Community Committeemen have been mailed to all farmers in the county They must be returned to this office by September 15th and will be tabulated and counted by the County Committee on September 18th

Three regular and two alternate members will be elected in each of the 16 Communities in the County The three regular members will also serve as delegates to the County Convention to elect the County ASC Committee for the coming year.

The County Convention will be held Thursday, September 25th, at 8 00 p m in the Farm and Home Center

Newly elected Committeemen will take office October 1st.

Agricultural Conservation Program

Farmers who have completed practices under the 1969 ACP are urged to file report of performance (Form ACP-245) along with bills or weight slips for the materials used. This must be done before any payment can be made.

To date, we have no definite information on the 1970 program. No requests can be accepted until allocation of funds is received and the County ACP is approved

Wool Incentive Payments

Farmers who sold wool or unshorn lambs should file application for wool incentive payments.

Original sales slips must be submitted with application. These must include all sales information, be signed by the buyer and those for lambs must include a certification by the buyer that they were unshorn at time of sale

A COMPARISON of tobacco grown with suspension fluid fertilizer (left) and tobacco fertilized in conventional ways was made on the farms of Amos Hoover, and David Martin, both of New Holland R1. R. E. Fuller, Atlantic Region Sales Manager for Allied Chemical Corporation said a suspension is sort of a cross between a clear liquid and a solid fertilizer made with a finely divided attapulgite wherein, the solids are suspended in a gel clay.

4-H Club Activities

Penn Willows
By Eric Eshleman

The regular monthly meeting of the Penn Willows 4-H Club was held Friday, September 12 at the Pequea Twp. Elementary School. Thirty-six eager young club members and 24 adults attended the meeting. The meeting was in charge of President, Tim Brenelsen.

A talent show followed the business meeting. In the show were entries of a tumbling skit, a cooking skit put on by the Chef League, instrumentalists, vocalists, and a guest drummer, Bill Musser, from Conestoga. Leaders were given a chance to win some ribbons for answering questions. They were judged by Mrs. Doris Thomas, home economist.

The meeting was adjourned by the president. The next meeting will be held October 10.

WHEN THE WARWICK FFA boys say they will have fresh chicken for the Chapter Bar-B-Q they mean it. Setting up this gimmick photograph for Lancaster Farming is (left to right) Ken Grube, committee chairman; Gerald Martin, vice president, Jay Showalter and Mike Herr. The chicken bar-b-que will be held Saturday, October 4, at the Lititz Springs Park and proceeds will send members to the National FFA Convention at Kansas City. Tickets will be $1.00 for a half a chicken and may be purchased from any Warwick FFA member on the day of the affair at the park.

NEW Purina Dairy Conditioner Special can prepare cows for good production at low cost

If you're not among the many good local dairymen who have started mixing NEW Purina Dairy Conditioner Special with your own grain to build a research-proved dry cow ration, it can pay you to check into this low-cost way of feeding dry cows.

New Purina Dairy Conditioner is a 16 percent protein ration, fortified with extra Vitamins A and D plus phosphorus to help guard against milk fever.

To help you save on dry cow feeding, Purina Research recommends varying feeding levels, depending on cow condition and the quality of your roughages. For example, if a cow is in good condition and your roughages are of excellent quality, you would feed less Purina dry cow ration than if the cow were in only fair condition and if the roughages were of only fair quality.

Using Purina Check-R-Mix* formulas we can build you a low-cost dry cow ration, combining New Purina Dairy Conditioner with your grain. Or, if you're feeding low-protein roughages, it may pay you to feed Dairy Conditioner "straight"—just as it comes from the bag.

More and more successful area dairymen are proving that good dry cow feeding pays off in extra cow condition—and extra milk production in the next lactation. For example, 100 to 200 pounds of additional body weight at freshening can pay off in 1,000 to 2,000 pounds of extra milk during the lactation.

Drop in soon and get your free copy of the Purina Dry Cow Program folder. We'll be glad to point out how new Purina Dairy Conditioner Special can help prepare your dry cows for good production at low cost.

PURINA CHOWS

Forage Day; Hay Show Scheduled

Southeastern Pennsylvania forage minded farmers will have an opportunity to observe the latest research on forage establishment, varieties and quality at a Forage Day and Hay Show, September 30.

The event will run from 10 00 A M to 12 30 P M at the Pennsylvania State University Southeastern Field Research Laboratory located near Landisville, reports Lancaster Assoc Agric. Agent Arnold G Lueck

Field research studies to be visited include legume establishment, legume varieties, summer annuals, corn hybrids and soybean varieties

Interested farmers are urged to bring along 1969 grown hay samples (bale sections at least 10 inches thick) for display and judging A brief program on hay quality and evaluation will be presented.

The program has been scheduled in the morning so that farmers may return home in time for afternoon field work

To reach the laboratory, turn off U S Route 230 by-pass at Salunga Go north on Spooky Nook Road ¼ mile, turn left on Shenk Road ½ mile, go through covered bridge and turn right All turns from the main highway will be marked.

Additional information including hay show entry forms are available from the Agricultural Extension Office

87 Bushel Corn Yield Forecast

Corn yield prospects for the Commonwealth were forecast at 87 bushels per acre on September 1. This was an increase of one bushel from the 86 bushel prediction of the month previous and one bushel below the 1967 record

The Pennsylvania Crop Reporting Service said that total corn production is estimated at 78,909,000 bushels and, if realized, will be the second highest of record While the figure is one million bushels short of the huge 1967 crop, expected production would be about 50 percent larger than the 1963 67 average

Hay yields have hit a record high of 2 18 tons per acre, and farmers are now working on later cuttings of both alfalfa and clover Production, expected to reach 4,220,000 tons, is the largest output since 1924 and about 3 percent above last year Both alfalfa and clover yields increased a little from month earlier predictions while other hay yields remained at the same level

Business Opportunities

NO MATTER WHAT TURNS YOU ON...

A Career in Agri-Business Offers a Rewarding Future

Agri-business has the answers to the big challenge of the seventies... feeding the poor and underprivileged in our own country... exporting food and technical know-how to help other countries solve their own food problems. Take your pick of professions... there's a need for agriculturally oriented people in all major industries, in government, in teaching as well as the actual production of food and fiber.

If change is your challenge, agri-business is your field. A career in agri-business will equip you to make a substantial contribution to humanity through service in the Peace Corps and other agencies which supply technicians to other countries.

One thing more. You don't need a farm background to follow a career in agri-business. Modern agriculture can be and is learned in the classroom without benefit of exposure to practical application.

Consider a Career in Agri-Business

Science, Finance, Research, Teaching — you can "do your thing" in agriculture. It's the oldest and most basic industry and promises to be the most critical for many years to come.

Farm Foundation Debt Reduced; Favorable Tax Ruling Received

An air of optimism seemed to be generated among the Lancaster County Farm and Home Board of Directors Tuesday night as reports of a further decrease in the total debt was reported and word of a favorable tax exemption ruling for the foundation was received

George Lewis, Treasurer, reported a reduction on the Principal on Mortage of $6,000 during the last month bringing the total debt down to $144,000 and Jack Lee reported the total realized from the latest fund drive at $71,298 to date Continued efforts to obtain contributions will be made to further reduce the debt to a level that can be born by the operating income

A statement from Paul S Beitz, Lancaster Certified Public Accountant, informed the directors that a favorable ruling for tax exemption had been obtained for the foundation from the Revenue Service on every item that had been requested

Howard Campbell, Center Manager, reported 73 meetings listed for September and total income from meeting room rentals for the first six months of this year at $4 474 and an estimated income from these rooms for the year was put at $7.579

Other discussion centered around a water seepage and flooding problem at the Center and meeting room and lease rates The meeting lasted less than two hours

Black And White Show Has 641 Entries

A record six hundred and forty-one entries have been accepted for the Sixteenth Annual Pennsylvania State Black and White Show scheduled for the Farm Show Building at Harrisburg on Tuesday, September 23, a feature attraction of the Pennsylvania All-American Dairy Show week. The state show is certain to be the largest show of its kind in the nation this year according to William C. Nichol, Secretary of the sponsoring Pennsylvania Holstein Association.

Nationally recognized dairy judge, Richard E Keene, Keeneland Farms, Gilbertsville, New York, will be placing the classes and selecting champions in both the male and female divisions Special awards will be presented to the thirty-two class winners as well as recognition of the Permier Breeder and Premier Exhibitor The show entries qualified at one of thirteen district black and white shows held during July and August across the state where a record high of 2140 Registered Holsteins were exhibited.

Forty-seven of the entries will be offered at public auction at the State Holstein Sale scheduled for Monday, September 22, 6:00 p.m. in the Farm Show building, Small Arena. Each of the sale entries are also eligible for the Pennsylvania All-American and Eastern National Holstein Show competition on September 25 and 26.

Shuman Calls For United Farm Workers To Prove Commitment

American Farm Bureau president Charles B Shuman this week challenged Cesar Chavez and the leadership of the United Farm Workers Organizing Committee to "proveout their professed commitment to non-violence" and do all in their power to spare the grape-growing areas of California from "an apparent return to violence"

Shuman noted police reports in and around Delano, California that establish a possible pattern of arson and vandalism in vineyard installations and packing sheds Most severe was a $200,000 fire that destroyed the packing sheds of Bruno Dispoto Company in Delano Delano police report evidence of arson Two hours earlier a similar fire destroyed a box shed of the Elmco Vineyards in nearby Ducor inflicting damages to property and machinery estimated by the Tulare County Fire Department at $104,000. The Department's chief arson investigator Euel Goldsmith reports the fire was deliberately set. Other Delano area growers reporting substantial fire and vandalism damage to properties within recent months are, John Giumarra, Antonell Farms, Patti-Bono, and M. Caratan Two attempts to burn the Bianco sheds in Delano have been discovered in time to prevent major damage. Delano police chief James Ailes says he finds this pattern "more than just a coincidence"

"Whether or not these are tactics of desparation by those driven by the failure of the boycott to bankrupt grape growers," Mr Shuman said, 'these acts must be condemned by all parties to this controversy — and they must be ended"

"Now is the time," he said, "for the repeated pledges of non violence on the part of Chavez UFWOC, the California Migrant Ministry, and other ministerial organizations who support the boycott to assert themselves strongly in the tensions of the grape controversy"

Mr Shuman said that, while final returns are far from in, "the boycotters are losing their boycott" He noted the increasingly free movement of California table grapes into the major markets of North America — some of them newly created by the necessity of the boycott Only in Boston and Toronto are combined numbers of chain stores still holding out against the sale of grapes, he said, "— while independent stores and smaller cooperative merchants are enjoying a record business in the sale of grapes" He predicted an end to the chain store hold outs in those cities in "the very near future"

Shuman conceded that opposition from UFWOC and its allies in the clergy and among a few industrial unions is still formidable, and that "we may expect some last-ditch resistance in areas where boycott organizations have become well-entrenched" He named Chicago and St Louis as cities where boycotters are re-grouping for an intensified push against chain stores handling grapes.

"But between September, 1968 and September, 1969, a full year's exposure and understanding has separated much of the truth about the boycott from much of the distortion that covered it," he said, "there is far greater public understanding today of the gross misrepresentations of the boycotters, and of the threat the boycott imposes to consumer freedom in the marketplace" A great deal of the credit for this, said Mr. Shuman, must go to Farm Bureau Freedom to Market Committees in 38 states who have worked to change public mis-conceptions about the boycott, and to keep markets open and expanded for farmers who produce California grapes. "This operation has proved Farm Bureau's effectiveness in direct involvement to maintain freedom in the marketplace," he said, "it represents experience and expertise that can be used against future threats to farmers' markets wherever they may occur."

Expansion Of Food Supply Must Come From Technology Advance

Any significant expansion of nation's food supply will have to come from additional technological advances rather than expansion of agriculture's physical resources, Herrell DeGraff, president of the American Meat Institute, said this week.

Addressing the New York Section of the Institute of Food Technologists at the Sheraton Motor Inn, 12th and 42nd St., New York, DeGraff said:

"It is disturbing that we hear so much criticism of the technology necessary today on the farms and in the food industries to meet the food needs of an ever-increasing population, and from an agricultural resource base that cannot be significantly expanded. The essential 'stretch' has to be technology. A unit of land or a unit of breeding livestock is not a static entity as long as technology continues to expand its yield potential."

DeGraff described as a serious problem for the food industry the criticisms that have been directed against the use of fertilizers and pesticides, "without which there would definitely not be food abundance even for today's population."

He continued: "When we are as far advanced in technology as we are today, it goes almost without saying that we are working always at the edge of our knowledge and understanding Every field of science pertinent to our food is facing real challenges.

"If the decades behind us have belonged to the biological scientist and the agronomist, the years ahead may well belong to your fraternity, the food technologists"

Americans today get their food supply with the least amount of total economic effort ever known to any sizeable population group — something under one day of work out of the five day work week of the typical family, DeGraff said

"Our problem is that the public is seldom concerned with, or students of, or much impressed with what is commonplace Our food is so abundant, so varied, so universally available that our typical citizen takes it for granted," he said.

"He gets it so cheaply, by all historical comparisons, that he gives it little thought. He, or she, seems even to get angry when the price goes up for important items, because demand outruns the immediately available supply and higher price is necessary to call forth more production as quickly as adjustments can be made"

DeGraff described the current "consumerism" movement as a by-product of technology in that the homemaker faces increasing complexities in her job of being the "purchasing agent" for her family

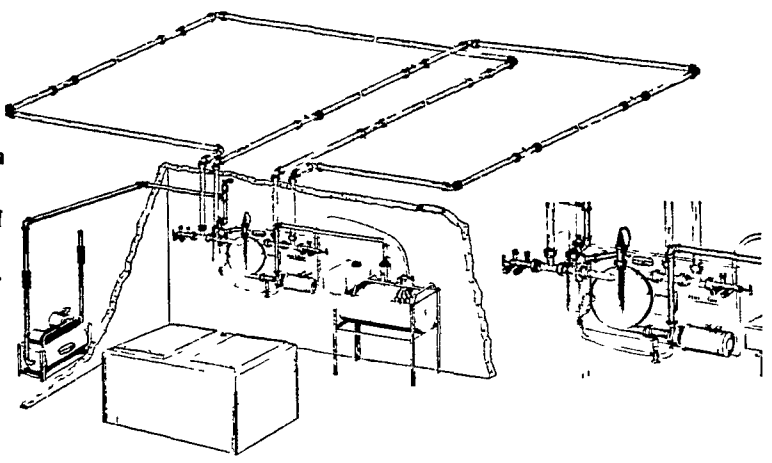
Perfection Can Put A Pipeline In Any Barn

WHY BUY A PIPELINE?

For An Average 40 Cow Herd You Can . . .

1. Save walking 100 miles a year.
2. Save carrying 292 tons of milk a year.
3. Save 200 hours per year on an average herd.
4. Produce higher quality milk.
5. Increase your milk production.



WHY BUY A PERFECTION PIPELINE?

1. Engineered for the modern dairy farm of today as well as the dairy farm of tomorrow. Around the barn pipelines and milking parlors.
2. The only milkhouse control unit that is assembled at our modern new factory on a stainless steel panel. Pretested for trouble free operation, self-draining with patented washing features.
3. Built and guaranteed by Perfection Milker-Division of Sta-Rite Industries, Inc., of Delavan, Wisconsin, a recognized leader in home water systems and agricultural components.

FOR THE
FARM WIFE
AND
FAMILY

Expert Seamstress, Good Cook, Talents of Mrs. E. Robert Bare

Chairman of Domestic and Fine Arts At West Lampeter Fair

By Mrs. Charles McSparran
Lancaster Farming
Staff Reporter

The fair grounds at Lampeter will be the scene of animation next week when their forty-fifth annual fair gets into swing It is strictly an agricultural and educational fair with no concessions This fair has a board of 45 directors. Roy B Herr having been on the board all 45 years of its existence The fair association operates a restaurant and dairy bar The F.F A, F H.A and Varsity Club also operate food stands A well-rounded program of entertainment is planned This fair has a fine display of farm machinery and other commercial exhibits

Last year West Lampeter Fair Association paid out $2756-00 in premiums Among the interesting displays in the old grade school house at Lampeter which is of particular interest to women is the Domestic And Fine Arts exhibit of which Mrs E Robert Bare (Elva) is chairman She has exhibited at the fair for years but last year was her first year to assist in the work of the fair They had some 275 entries of sewing and handiwork articles They will start accepting exhibits next Tuesday noon.

Mrs Bare is an expert seamstress She won first place on a coat last year at the Pennsylvania Farm Show She makes her own drapes, clothing for herself and children She is a sewing instructor together with Mrs. Elvin Hess for the Lampeter-Strasburg Merry Maids 4 H Club of which Mrs Robert Hess is the leader They have 27 girls in the Sewing Club and 8 in the Cooking Club They have had their round-up this year

They held a fashion show August 6 at the Farm and Home Center in Lancaster and the Cooking Club served cookies and a drink Achievement Day was held in August at the Lampeter-Strasburg High School and Miss Marilyn Krantz from their club was selected as 4-H Queen The Merry Maids meet at the Martin Mylin Jr High School which is near the Senior High School Elva, herself, was a 4-H member at Manheim when Mrs Benjamin Sheaffer was the leader Mrs Bare, the daughter of Mr and Mrs Paul Sauder of Manheim, attended Manheim Central High School

The Bares own a beautiful 63 acre farm on Millport Road between Bridgeport and Lampeter where they have lived the past 18 years John Lapp farms it together with several acres from neighboring farms They have a herd of 30 Holsteins and own the farm equipment They grow corn, wheat and hay Mr Bare helps some with the farm work and is one of the Garden Spot 4-H leaders. He is a hunter They have a summer cabin in Tioga County with 12 other families Last year he caught a large sail fish in Mexico which makes a beautiful wall decoration for their living room He is a boat enthusiast The family enjoys boating and water-skiing in the Chesapeake Bay

Mr Bare and his brother Jacob are partners in the E K Bare & Sons, Inc potato brokerage business at Bird-in-Hand They buy potatoes from Maine to Florida, mostly in the eastern section of the United States The potatoes from Maine are used largely for seed Ninety per cent of the potatoes they buy go to chip factories They do not own trucks but truck-owner-operators work for them Most of their business is conducted by telephone Mrs Robert Bare and Mrs Jacob Bare assist in the office work

Mr and Mrs Robert Bare have four children The oldest are seventeen year old twin girls Karen and Carol Carol helped at the office of E. K Bare & Sons this summer Karen worked in the bake shop at Plain & Fancy Farm & Dining Room Both of these girls are good cooks During school season when their mother is working at the office they take turns cooking at home They are Seniors at Lampeter-Strasburg High School. Carol is taking a business course and is interested in food She was in F H A. last year and was one of the secretaries for one of the teachers at school Karen want to go to college and take an elementary education course She likes drama and takes part in 4-H and school plays She is cheer leader for the wrestling club Both girls are in the 4-H Sewing Club Donald is 16 and takes an Agriculture course at Lampeter-Strasburg and is in F F A He was on the Jr High School basketball team last year He wants to be a dairy farmer He is raising three calves for veal He loves to run the tractor on their farm Julia is 9 and attends Hans Herr Elementary School

The Bares are members of Stumptown Mennonite Church Farm Women Society #22 Mrs Bare teaches a class of which has 28 members and Mrs. Paul Miller of Lancaster is president. Their money-making projects consist of rummage sales, food stands at sales and food and garden sales among their members They have contributed to the County Home, American Red Cross, Easter Seals, Cleft Palate, Farm and Home Center, American Cancer Society and Halfway House They enjoyed a swimming party this summer and have a trip planned to Allentown. They have had interesting programs with a speaker from Cleft Palate, a foreign exchange student to speak and Mrs. Mark Weaver told how to dry flowers and exhibited some arrangements.

Mrs. Bare says "I enjoy sewing, I enjoy reading and I enjoy traveling." Last fall they flew to Mexico and they fly to Florida sometimes. These trips to Florida are partly business and partly pleasure. She has made some embroidered quilts in the past but doesn't have time to do it at present. Besides being an expert seamstress Mrs. Bare is an expert housekeeper. She says she also

CREATING a lovely dress for her daughter is Mrs. Robert Bare. An expert seamstress, Mrs. Bare won first prize at the Pennsylvania Farm Show last January with a top coat she made. L. F. Photo

MRS. BARE is chairman of the clothing and needlework at the Lampeter Fair. The coat she is wearing was made on her own sewing machine and took first prize at the Pa Farm Show A fine dieffenbachia plant is in the background. L. F. Photo

Mrs. Elva Bare in her immaculate kitchen pours a glass of ice tea made from one of her favorite recipes.

For The Farm Wife

(Continued from Page 20)

likes to cook. Here are a few of her preferred recipes:

LEMON JELLO

Pour 2 cups boiling water over 2 packages lemon jello and 8 large marshmallows. Allow to cool then add 2 sliced bananas and 1 cup crushed pineapple. Pour into pan and chill until firm

Topping Beat together 1 egg ½ cup sugar, 2 tablespoons flour, 1 cup pineapple juice. Pour this into a heavy kettle where 2 tablespoons butter has melted Bring to a boil and cook until slightly thickened Cool Mix 1 package Dream Whip to directions Fold into topping mix Spread on top of chilled jello

Optional· Sprinkle with ½ cup finely chopped nuts. Serve on lettuce.

SEAFOOD CASSEROLE

- ¾ cup thin broken noodles (cooked)
- 1 cup whole kernel corn (drained)
- 1 5¾ oz. can of shrimp (drained)
- ½ cup sliced mushrooms
- 1 cup cheese sauce

grated cheese

To make cheese sauce—melt 1 tablespoon butter. Add 1 tablespoon flour. Stir and add ¾ cup milk Bring to boil and add white American or Velveeta cheese. Stir until cheese melts.

Place noodles in greased casserole Arrange corn, shrimp and mushrooms over noodles, cover with cheese sauce. Sprinkle with grated cheese. Bake at 350 degrees for minutes.

CORNED BEEF CASSEROLE

- 12 oz. can corned beef (broken)
- ¼ lb. cheese chopped (1 cup) (mild cheese such as white American)
- 11½ oz. cream of chicken soup
- 1 cup milk
- ¼ cup chopped onion
- 8 oz. noodles cooked and drained

Alternate layers in greased 2 qt baking dish Top with ¾ cup buttered crumbs or wheaties. Bake until heated through at 375 degrees for 30 to 40 minutes

GRAPE PUNCH

- 2 cups sugar
- 1 6 oz. can frozen grape concentrate
- 1 6 oz. can frozen orange concentrate
- 2 qt. ginger ale

Bring to a boil and cook for 3 minutes the sugar and 2 cups water. Cool Add the concentrate which has been diluted in one qt. of water. When ready to serve add the ginger ale and ice

ICED TEA

Into a gallon container half full of water dissolve 2 tablespoons instant Nestea, 1¾ cups sugar, and 1 can (6 oz.) lemon juice frozen concentrate. Stir until dissolved. Add ice and fill to gallon mark.

LEMON PIE ALAMODE

- ⅓ cup butter
- 2 teaspoons frated lemon rind
- ⅓ cup lemon juice
- ¼ teaspoon salt
- 1 cup sugar
- 2 eggs
- 3 egg yolks
- 1 qt. vanilla ice cream
- 1 baked pie shell with high fluted edge
- 3 egg whites
- ½ cup sugar

Melt butter in double boiler. Add rind, juice, salt and 1 cup sugar. Beat the whole eggs and the yolks and stir into the butter mixture Cook over boiling water, stirring constantly till it's thick and smooth Remove. Cool Soften ice cream slightly Put half in pie shell. Carefully spread half the filling over Freeze pie till firm and repeat Beat the whites till foamy Add sugar gradually and beat till stiff Spread on pie, sealing to edge Place on a board and bake at 475 degrees for 4 to 5 minutes or until brown Freeze until ready to serve This will fill a 10 inch pie pan

Sanitation Hearing

A public hearing on proposed milk sanitation regulations will be held at 10 a.m. Oct. 10 in the State Agriculture Building.

State Agriculture Secretary Leland H. Bull said changes are necessary to "update outdated regulations"

"Some of our regulations were tailored for the days when milk was handled in cans," Secretary Bull said "They have to be revised to reflect technological changes"

He said the State Agriculture Department will recommend lower bacteria count limits for milk as well as tighter product temperature controls

"The consumer will benefit from these changes because the milk he purchases will keep longer and taste better," Secretary Bull said

Ladies, Have You Heard? . . .

By Doris Thomas, Extension Home Economist

No-Iron Wool

U S Department of Agriculture scientists have paved the way to no-iron wool by blending settable non-wool fibers with pre shrunk wool fibers After the finished garment is given a durable press treatment, slacks made from this wool blend can be machine sudsed regularly with never any need for ironing In addition to outstanding washability, this material retains the warmth and resiliency characteristics of wool

THOMAS

How You Can Help The Needy

There are many projects that volunteers can and do carry out successfully to help low-income families get maximum benefit from food help programs

Get the word out to low-income families that food help is available and how they can apply

Provide transportation for families who need help getting to the application office or in getting their food home

Conduct demonstrations on planning and preparing low-cost meals that make good use of the donated foods or food stamp help available for the area

Provide funds to print information and education materials and get small equipment needed for food demonstrations as well as to help finance emergency food delivery to destitute families

Enlist the support of local leaders and organizations to develop an effective family food help and nutrition program

Buying Guides For Services

When you buy repair services on television sets, autos, appliances, and equipment:

Look for repair shops with reputations for reliable service, well-trained technicians, and reasonable prices

Know essential facts about products — manufacturer's name, model number, date of purchase, dealer's name

Look at warranties issued at the time of purchase to see if repairs or parts are covered

Check service shop's guarantees on parts and labor

Ask for written estimates on cost of repairs and parts and for an itemized bill after servicing.

Return to the original seller when possible

Keep a list of repairs and services to be done in your home so several things can be done at one time It is less costly for you if a repairman makes one trip rather than several

Many Old Wives Tales About Pork Are Exploded

Many old wives tales about pork were exploded Wednesday by medical experts and nutritionists interviewed in a fact-loaded color film making its public debut before representatives of the communications media at a luncheon at the Lake Shore Club in Chicago

Chief among the fallacies regarding pork the experts said, is that "it is hard to digest," that it is too fat," that it is not good for you when you are sick, and that it should be left out of reducing diets

Not so, asserted the authorities in the film, "New Facts About Pork"

Those interviewed by Floyd Kalber, television newsman and commentator, were Dr Philip L White, of Chicago, secretary of the Council on Foods and Nutrition of the American Medical Association, Dr Franz Ingelfinger, of Boston, noted gastroenterologist and editor of the prestigious **New England Journal of Medicine** Dr William Darby, of Nashville Chairman of the AMA Council on Foods and Nutrition and Director Division of Nutrition Vanderbilt University and Dr Dorothy Rowe of Harrisonburg Va Chairman of the Diet Therapy Section American Dietetic Association and Dean of Home Economics, Madison College

Discussing digestibility — the degree to which digestive juices and enzymes change foods so they can be absorbed by the body — Dr Ingelfinger said

'In this sense, pork, including even its fat content is highly digestible in fact it is about 98 percent digestible'

Many people, he said, are convinced that fat is indigestible, and "as a result many digestibility problems are in the head, not the stomach

"Every physician has patients who insist they cannot eat food that is fried or that they cannot eat pork The truth is that pork can be lean Depending upon the cut and preparation, the fat content of a cooked lean portion of pork can be as low as nine percent"

Dr Darby asserted that because of its high concentration of several key nutrients, physicians regard pork as a desirable part of many special diets "such as those for peptic ulcer, diabetes, diseases of the liver, and in geriatric and pediatric conditions where it is important to maintain a good supply of high quality protein."

He said there is no more reason to take pork out of the diet than there is for eliminating other meats

Dr. White said that not only is carefully trimmed pork "extremely low in total saturated fat" but "outranks all other meats in thiamine Three and a half ounces supply a man with 66 percent of his daily needs of this important B vitamin This same sized portion provides an adult man with 45 percent of his daily protein need'

Regarding weight reduction diets, Dr Rowe commented 'Recent analyses show that the pork we buy today has less fat and more protein Therefore, pork rates as well as beef and veal when calories are being counted"

Dr Rowe pointed out that cooking procedures too, have changed for the new pork Housewives in the past thought they had to cook pork to an internal temperature of 185 degrees or more for roasts Now, she said, the recommended internal cooking temperature for pork roasts is 170 degrees

As for trichinosis, a parasitic disease from infected meat, Dr Darby said that from a medical standpoint it is "a clinical rarity in the United States"

The film was produced by the National Live Stock and Meat Board, the National Pork Producers Council and the American Meat Institute

1969 Farm Census Due January, 1970

How many farms are still operating in the United States"

The 1969 Census of Agriculture may count fewer than three million for the first time since 1870.

After a peak of 6 8 million farms counted in 1935, each farm census conducted by the Bureau of the Census has shown a steady decline in the total number of farms and ranches in the nation The 1964 census count was 3.2 million, a decrease of about 553 thousand from the previous census in 1959, which in turn showed a drop of about 1 1 million farms from the 1954 census Contributing to the decline from 1954 to 1959 was a change in the definition of a farm, accounting for a loss of about 232 thousand farms

The smallest decrease in any five-year period since 1935 was the 238 thousand between the censuses of 1940 and 1945 A comparable drop in the period between 1964 and 1969 would bring the total below three million.

The decrease in the number of farms has been accompanied by an increase in size, although there has been a slight reduction in the total amount of land being farmed The average acreage in 1964 was 352, an increase of 49 acres over 1959 and 109 acres larger than in 1954 In 1935, the peak year for number of farms, the average size was only 155 acres.

The greatest boom period recorded was 1870-1880, reflecting the westward movement following the Civil War and the subdivision of large land holdings The 4 008,907 farms counted in 1880 amounted to a 51 percent jump over 1870 The acreage listed in farms in 1880 was 536 million, a 10-year gain of 32 percent

Beginning in 1840, the farm census was taken at 10-year intervals at the same time as the decennial census of population After 1900, increasing demand for information at more frequent intervals to measure the effect of rapid agricultural changes resulted in a decision to take the census every five years, starting in 1925 Although each census listed inventory items on hand at the time of the enumeration, production figures were asked for the preceding year Time of the census was shifted in the 1950's to those years ending in four and nine and both inventory and production figures were made to cover the same year.

The 1969 Census of Agriculture will be the first to be conducted entirely by mail Questionnaires will be mailed to a master list of farms early in January of 1970 and farmers will be asked to fill them out and return them by mail Computers will be used in the check-in of returns to identify those farmers who fail to respond or fill them out incorrectly In those cases followups will be made by mail and telephone or enumerators will call to provide help

In addition to the number and acreage of farms, the census will determine the value of land and buildings, cropland harvested, acreage of irrigated land, acreage in major crops and numbers of principal kinds of livestock Other items concern the number of farm operators by age, value of farm products sold, the amount of time farm operators worked off the farm, income from recreational use of land, and the number of autos, trucks, tractors, combines and corn pickers

Among questions to be asked of operators with expected sales of $2,500 and over are number of regular workers, acres fertilized, amounts of dry and liquid fertilizer used for almost all crops, acres limed and the number of grain-fed cattle sold

Information will be obtained on the amount of money spent in buying feed, pesticides, gasoline and other farm fuels, machine hire, farm labor, livestock and poultry

Each farmer's responses to the questionnaire will be completely confidential as in the past The information acquired, minus names or clues to identification, will become a part of statistical totals and will be published in State and county groupings as well as for the entire nation

Sportsmen Urged To Halt Littering

Pennsylvania sportsmen are urged by the Game Commission to help insure the future of hunting by exerting every effort necessary to make 1969 seasons litter-free

Growing awareness of the litter problem makes this year an opportune time for hunters to cast themselves in a new mold and to regain public confidence shaken in the past by the senseless and thoughtless acts of a few persons unworthy of the designation "sportsmen"

Discarded lunch wrappers, beverage bottles and cans, ammunition boxes and the like are a bolt on the fine record compiled in the past by sportsmen Why should a landowner permit hunting when the intruder uses the property as a depository for garbage and trash which draws vermin like a magnet and is disgustingly unsightly?

Littering on public property is just as bad or worse, because this is an offense against all of society and everyone has to pay to help clean up the mess

Hunters are reminded that they face $25 fines and possible loss of licenses for leaving or depositing garbage, bottles, cartons, containers, glass, paper or other rubbish or debris on lands open to public hunting

Sportsmen can take the lead in the war on littering and show the general public how civilized beings should act

Dr. Robert Eshleman Named 4-H Alumni Recognition Winner

A Franklin and Marshall College professor, who has devoted countless hours to the development of youth, today was named recipient of a 1969 State 4-H Alumni Recognition Award.

Dr. Robert F Eshleman, professor and chairman of the Department of Sociology at Franklin and Marshall College, was judged winner of the coveted award "for outstanding service to educational youth programs."

A former 4-H member, he served as president of the Lancaster County 4-H Council for two years.

Carroll L Howes, assistant State 4-H leader at The Pennsylvania State University, who announced the award selection, said Dr. Eshleman was picked from among the 500,000 4-H alumni who have taken part in Extension Service educational program during the past 55 years.

Robert Eshleman

As a Lancaster County 4-H member, the award winner completed corn and tobacco projects. He also participated in 4-H leadership training school two years at Penn State.

Dr. Eshleman received his bachelor of science degree from Elizabethtown College and master of science degree from the University of Illinois. He was awarded his doctor of philosophy degree from Cornell University.

He first served as an assistant professor of sociology at Cedar Crest College. Dr. Eshleman has served in his present position since 1955.

The alumni award recipient is trustee and chairman of the Nursing Education Council at Bethany Brethren Hospital, Chicago, chairman of the legislative committee for the Lancaster County School Boards, and president of Board of Education, Donegal School District, Mount Joy.

Dr. Eshleman participated in the National Science Foundation Summer Institute at the University of California in 1962 and the National Outlook Conference on Rural Youth in Washington, D.C. in 1967.

He is past president of the Pennsylvania Sociological Society, was a fellow of the Society for Applied Anthropology.

Dr. Eshleman is one of two 4-H alumni to receive 1969 recognition awards. The other recipient is Mrs. George M. Swigart of Snyder County.

Large Potato Yield Expected

Pennsylvania's potato yield for 1969 is expected to average 230 cwt. per acre, second only to the 1967 yield of 240 cwt. Production from this year's 35,500 acres for harvest is forecast at 8,165,000 cwt., 8 percent more than a year ago and about 10 percent larger than the recent 5-year average production.

Digging of Cobblers, Superiors, and Red Norlands began in late July. Harvest of later varieties for processing markets was underway in late August. Additional acreage was being sprayed to kill vines in preparation for harvest. Few potatoes were being dug for storage due to the warm temperatures.

Dry weather prevailed during most of August but the crop was not hurt by this condition as it was a year ago. Tuber size was generally well developed before soils became dry, however rainfall will be beneficial to loosen the ground for digging. Numerous fields have poor stands resulting from adverse weather and poor seed but a good set generally offset this condition. Late blight exists in 11 counties but generally is not a serious problem at this time.

Nation's Fall Potato Production Larger Than Last Year

The 1969 fall potato production, based on September 1 condition, is placed at 231,899,000 cwt., 5 percent above the 1968 harvest and slightly above the crop harvested in 1967. Larger production in 1968 in the western and eastern fall States more than offset a decline in the central States. Idaho, Washington, and Colorado contributed to the much larger crop in the western States and Maine to the increase in the east.

The 1969 fall acreage for harvest is placed at 1,067,600 acres, slightly lower than the 1,070,000 acres estimated in July. In 1968 1,030,300 acres were harvested and in 1967 acreage was 1,088,600. The yield is forecast at 217 cwt., 3 cwt. above 1968 and 5 cwt. above 1967.

In Maine, growing conditions have generally favored development. Killing of vines started in late August, and a few acres were harvested, but general harvest is not expected until late September or early October. In other New England States, except Vermont, yields are expected to be equal to or better than 1968 somewhat partially offsetting smaller acreage in these States. On Long Island and Upstate New York, conditions have generally favored growth although in Steuben County, August was on the dry side.

The larger production for Indiana, Michigan and Minnesota is more than offset by smaller crops indicated for the other States. In Ohio, rain caused damage to considerable acreage. In Wisconsin, July was too wet and August was too dry for good development. Propects by fields vary widely. In the Red River Valley of Minnesota and North Dakota, August was dry. Rain in the Valley in early September should be beneficial. Good yields are indicated in Nebraska.

Conditions have favored growth in Idaho. The crop in Colorado developed well throughout the growing season. The crop in Washington developed well during August. A good crop is expected in Malheur County, Oregon but scattered frost in both the Klamath Basin and central areas in August cut the potential yield. In California, freezing temperatures occurred in the Tulelake low temperatures caused variable amount of damage by fields. Prospects for the Tulelake area are the lowest for several years. In other areas of California, the crop made good development during August.

"CUCUMBERS ARE A PROVEN CASH CROP."

The Best Time To Spread Lime Is . . .

When is the right time to get the lime spread that your farm or individual fields need? According to agronomic authorities, it makes no difference, as long as the interval is long enough to get the material worked into the soil. A good rule of thumb is to apply the limestone a year in advance of a legume seeding. This gives the agricultural limestone a year to get thoroughly worked into the soil for maximum benefit to the legume crop you intend to plant. It provides an interval for thoroughly mixing into the soil an application of agricultural limestone and deriving the maximum benefit from this application.

Too many farmers wait to order their agricultural limestone until the day they plan to seed a field to clover or legumes. As this is usually in the Spring, the fields are soggy or wet and the trucks attempting to make deliveries get mired in the mud. The farmers cooperate with the distributor by hitching a tractor to the truck to speed up the process or eliminate the problem, but this isn't enough.

This procedure of liming just before seeding is basically wrong because the minerals supplied by limestone don't have a chance to react in the soil and to correct its mineral deficiencies. It is also wrong because limestone producers or distributors in pricing their products must take into account all of the breakdowns encountered in making deliveries. So why pay for truck-down-time when wear and tear on equipment and nerves are high, rather than paying for good service? The knowledgeable farmer will order his limestone for delivery in the off-season when demand is off and conditions help reduce costs.

The national Limestone Institute says you should plan now for your crop needs next year and get the limestone needed to improve your crop production next year. To get prompt and efficient delivery, put the limestone on this Fall before the difficult Winter and Spring seasons roll around.

There is no best time to apply agricultural limestone other than to get it on as far off-season and as far ahead of the rest of your neighboring farmers as possible.

Fall Clean-Up

A Fall clean-up program helps to control plant diseases in our home gardens. Many of the fungi, bacteria and other organisms that cause diseases in the garden during Spring, Summer and Fall overwinter on the dead leaves and other plant refuse. The destruction of dead leaves and other plant refuse can help reduce the infection of young plants in the Spring. Many gardeners maintain a compost pile in the corner of the garden. Dead leaves and other plant refuse from infested flowers and vegetables should not be added to a compost pile as this is just another way of maintaining disease — causing organisms for the next season.

Rules And Regulations For Frozen Desserts To Be Discussed

Proposed rules and regulations for frozen desserts and frozen dessert mixes will be discussed at a public hearing to be held at 2 p.m. Oct. 8 in the State Agriculture Building.

State Agriculture Secretary Leland H. Bull said the state's dairy and ice cream industries have been invited to attend the hearing and express opinions.

Secretary Bull said new rules and regulations are necessary for frozen dessert products which are currently being sold in other states but which cannot be sold in Pennsylvania until guidelines are adopted.

The products include "Mellorine" and "Parevine," both of which resemble ice cream. In "Mellorine" dairy fats are replaced with vegetable oils while in "Parevine" all dairy ingredients are replaced.

The Pennsylvania frozen dessert law (Sept. 1, 1965, amended June 4, 1969) states that it is "in the interest of the dairy industry and the consuming public that there be uniformity of standards for frozen desserts . . . to the end that the inefficiency and needless expense and confusion caused by differences in products sold under the same name, and differences in labeling of identical products, may be eliminated."

The frozen dessert law requires that rules and regulations be written which will be based on testimony given at a public hearing. The law also provides that interested parties be given an opportunity to file exceptions to rules and regulations which the State Agriculture Department may adopt.

Use Proper Lawn Seed

Lawns may fail for any number of reasons. Among these are poor selection of seed, says John C. Harper, II, extension lawn specialist at The Pennsylvania State University.

For sunny areas, he suggests Merion bluegrass alone or a mixture of Merion bluegrass and Kentucky bluegrass. In moderate shade, use a mixture of Pennlawn red fescue, Poa trivialis, and Merion or Kentucky bluegrass. Under heavy shade use a mixture of Pennlawn red fescue and Pot trivialis.

Contact your county extension agent to recommend the proper seed mixture for your particular situation and location.

Lawns given thought and proper preparation will usually be lush lawns.

Applying Lime

September is one of the best months for applying lime, particularly on land to be soded to legumes in 1970. Lime must be applied well in advance of a new legume seeding and well mixed with the soil if it is to work properly. Lime should also be applied now if plans call for planting sod next Spring so the soil audity will be corrected by the time the field is planted. Before liming, be sure to have your soil tested so the proper rate is applied per acre.

Gas Lite Naphtha

Corn Silage

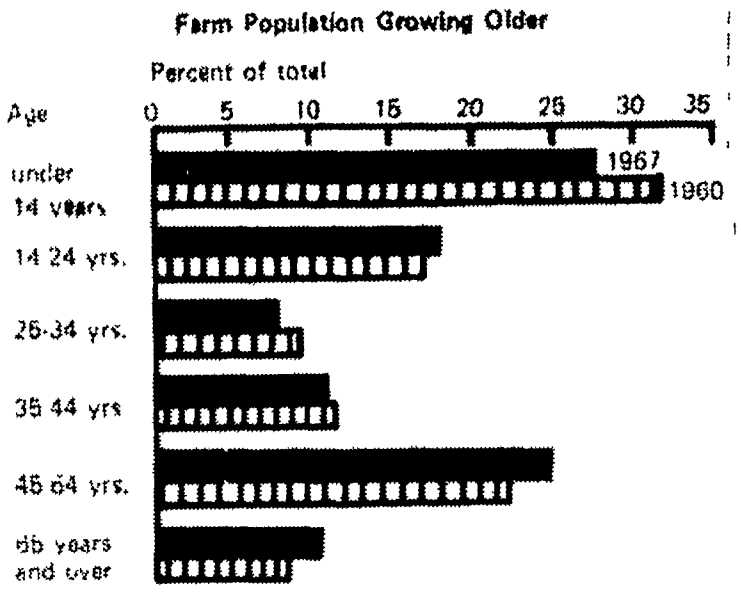
Adding the proper amount of urea to corn silage can be a means of lowering protein supplement needs in feeding programs. The best time to add urea is at ensiling when the moisture level of the corn silage is in the range of 60-70 percent, preferably 65-70 percent. The urea may be added to the corn at ensiling at the rate of 10 pounds per ton of forage. It's important to do a good job of calibrating forage wagons as to capacities of material at the recommended moisture levels A forage ration consisting solely of urea corn silage may require a grain mixture with 14-15 percent crude protein compared to 18-27 percent for straight corn silage No other urea should be fed to dairy cows if urea silage is the sole forage used.

A Lancaster Farming Classified Ad Can Help

Farm Population Shrinks In Size And Grows In Age

The number of people on farms continues to decline Between 1960 and 1967, the farm population fell 30 percent, according to the latest Census report

About 10 9 million people lived on farms in 1967, or about 5 5% of the total U S population accounted for 8 7% of the total



Most of the decline in farm population has resulted from young persons raised on farms not joining the agricultural labor force, rather than from farmworkers leaving agriculture for other types of employment This is reflected in the changing age structure of the farm population.

Traditionally, farm population has included a high proportion of young people. But in 1967, only 28% of persons living on farms were under 14 years of age. In 1960, this group made up 32% of the farm population In this period, persons 45 years and over increased from 30% of farm population in 1960 to 35% in 67

It is noteworthy that about 83% of the total farm labor force consists of self-employed persons and unpaid members of their families These people are less mobile than are wage and salary workers or young people who are seeking their first full-time job For the farm operators, a move to full-time nonfarm employment may require liquidation of the farm business

One million U S farms will disappear by 1980, from three million in 1968 to two million, according to Federal Reserve Bank of Chicago projections On the other hand, the average farm size will increase 40 percent from 369 acres in 1968 to 525 acres in 1980, and gross sales per farm will rise from $16,000 to $28,000. The biggest farms will be operated by only 3 5 men, says the bank

Bull To Speak At Ag Agents Convention

State Agriculture Secretary Leland H Bull will speak in Atlantic City Sept 23 at the 54th annual meeting of the National Association of County Agricultural Agents

Secretary Bull will be the 4-H alumni speaker and will discuss the need for cooperation between regulatory and educational agencies

He was one of eight persons selected in 1966 to receive the 4 H Alumni Key Award, the organization's highest honor that is bestowed on former 4-H members who "exemplify effective community leadership, public service, service to 4-H, and success in their chosen careers"

Pillow Tanks Used For Fertilizer In Brazil Program

Giant collapsible rubberized storage containers called Pillow tanks will play a major part in a new fertilizer application program designed to increase food production in Brazil, The Goodyear Tire & Rubber Company announced this week

Fourteen 100,000-gallan-capacity tanks will be linked together to form a huge storage depot for phosphoric acid, a liquid fertilizer, at a new agricultural fertilizer supply station near Santos, Brazil.

Fertilizantos Fosfatados Mexicanos, S A , a Mexican fertilizer manufacturer, purchased the tanks as part of a new marketing program that provides customers with both fertilizer and containers for its storage, Claude E Davis, Industrial Products special products marketing manager, said

Use of Pillow tanks, which can be collapsed and transported in small crates, will permit the company to install, remove and transfer complete fertilizer supply stations easily and quickly, he said.

The Goodyear Pillow tanks will be made of butyl rubber and polyester fabric, both acid-resistant, and will have a white exterior coating for heat reflection

The Santos installation will mark the first major usage of Pillow tanks for storage of phosphoric acid and will be the world's largest commercial facility using Pillow tanks for storage, according to Goodyear International Corporation, a Goodyear subsidiary, which handled the sale

The Santos installation is being designed by Wellman Lord, Inc , a Lakeland, Fla , engineering firm The Pillow tanks will be built at Goodyear's coated fabric products facility in Rockmart, Ga

Dairy Assn. Promotes Eggs

The American Dairy Association promoting eggs?

It's true In a letter to Dr. L. A. Wilhelm, president of the Poultry and Egg National Board, ADA's promotional director advised that eggs are one of the "related food items" included in the dairy group's mammoth Fall Keys to Good Nutrition promotion.

The campaign, based on the four food groups, includes advertising in national women's magazines and point-of-sale materials in 20,000 supermarkets The idea is to show Mrs Consumer how "Milk belongs with every meal"

In the September issue of **Family Circle** magazine, for example, the ADA highlights scrambled eggs (and a glass of milk) as a breakfast suggestion for busy "Meal-a-Minute Mothers."

The same issue, coincidentally, features a two-page, full-color photograph and recipe for an "Early-Bird Omelet" that includes eight eggs, cheese, onions, and red and green peppers. This feature would have cost PENB $60,200 if it were purchased as advertising space, reaches nearly ten million households

Plant Perennials

Many perennials can be planted in September, say extension floriculturists at The Pennsylvania State University

Iris, peonies, daylilies, hardy bulbs, and phlox are among those which can be set. Try to purchase bulbs locally, or from very nearby mail order firms, so that such plants will have less adjusting to do before winter.

Pa. Milk Production Is 272 Million Qts.

Pennsylvania's milk production in August totaled 272 million quarts, 10 million quarts more than in August 1968.

It was the eleventh time in 12 months that milk production actually was up from a year earlier, according to the Pennsylvania Crop Reporting Service

The only interruption occurred in February when production fell almost two million quarts below the previous February which had 29 days. The 28-day comparison, however, shows the February 1969 production was 3 percent higher than a year earlier.

U.S. milk production in August was one-half of one percent higher than in the previous August, the first time since July 1967 — more than two years — that an increase was recorded. By comparison Pennsylvania's August increase was 3.9 percent.

Milk cow numbers in the nation, estimated at 12 7 million, was reported by the U S. Department of Agriculture to be the lowest since 1887 Pennsylvania's total, estimated at 722,000, was at the lowest level since 1871

Sliced Bacon Gains In Popularity

Sliced bacon, long a favorite in the American diet, is steadily gaining in popularity, the American Meat Institute reports

So far this year, production of sliced bacon in federally-inspected meat packing plants is up about three percent over the same period of last year. Even with the population increase, this means that the average American will consume about 152 slices of bacon (22 to the pound) this year — about 2½ slices more than he did last year.

Here are the figures During the first 8 months of 1969 sliced bacon was produced in federally-inspected meat plants at an estimated annual rate of 1,380,000,000 pounds Production totals for previous years were 1968 — 1,340,092,000 pounds, 1967 — 1,230,340,000 pounds, 1966 — 1,069,599,999 pounds, and 1965 — 1,065,599,000 pounds

The wide variety of dishes such as bacon and eggs, bacon lettuce and tomato sandwiches, frankfurters wrapped in bacon, to mention a few, makes bacon the most popular single meat item.

American Meat Institute experts point out that the most important thing to remember about bacon is that it has to be fat to be good The fat contributes the characteristic bacon flavor and texture.

Even though the common belief seems to be that "the leaner the better," too much lean may result in a tougher, less desirable product.

Bacon is an excellent source of food energy and provides high-grade meat protein. Vitamin B1 (thiamine) and iron It also contains riboflavin, niacin, phosphorus and some calcium and contributes to over-all nutrient needs.

Bacon Selections

Generally, packers provide three or four different selections of sliced bacon The top selection contains slices which are uniform and have the best ratio of lean to fat and are selected for size and location of fat and lean streaks

The slices from the lower selections of bacon have the same flavor as the first, but the slices are less uniform and may be a bit less tender or slightly more coarse in texture In some cases the lower selections may contain fewer slices per pound because of wider, heavier slices in the package

There is usually available another selection of bacon consisting of broken slices Known as "ends and pieces," these are ideal for use in casseroles, salads, scrambled eggs and as seasoning for other dishes

The different selections can be distinguished by appearance and by price. In most instances, the packer's name is prominently displayed on his top selection.

Kinds Of Bacon

Thin-sliced bacon is usually packaged in 8-ounce, 12-ounce and one-pound packages and contains up to 36 slices per pound

Regular sliced bacon is usually packaged in one-half, one-pound and two-pound packages with an average of about 22 slices per pound

Thick sliced bacon is packaged both stacked and shingled in one and one-half and two pound packages with up to 18 slices per pound

Ends and pieces are available in various size boxes containing from one up to five pounds.

Pre-cooked bacon is available in cans that require no refrigeration, each containing 18 to 20 slices equivalent to one pound of uncooked bacon This bacon requires heating for only three to five minutes

Bacon crumbles or bits are completely cooked and ready to add to casseroles, sandwiches or any dish improved by bacon flavor

Closely related is Canadian-style bacon which is a very lean product made from boned, trimmed pork loin Canadian style bacon is available in several convenient packaged varieties including sliced

Cookery

Meat industry home economists say that the best way to cook bacon is

To pan-fry: Place bacon slices in an unheated skillet Cook over low heat, turning strips often during cooking Do not allow fat to smoke When evenly browned, bacon should be drained on absorbent paper It is not necessary to pour off fat during cooking

To bake: Arrange slices on a wire rack in a shallow pan Bake in a hot oven (440° F) for 10 to 15 minutes

To broil: Place separated slices of bacon on broiling rack Broil about three inches from heat source Turn to cook evenly.

Storage

The Meat Institute recommends that homemakers buy only enough bacon for one week For peak aroma and flavor, bacon should be used within five to seven days of home storage. Bacon should be stored in its original wrapper in the refrigerator.

Bacon slices separate easily if the package is removed from the refrigerator about five to ten minutes before using. Bacon may be frozen for short periods of time, but for best flavor, long storage in home freezers is not recommended

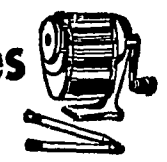
Correspondence Courses



Study Large-Scale Swine Farming

Hog growing has gone commerical No longer does the margin of profit on swine allow the luxury of a few sows farrowed once a year with pigs raised on home grown feeds and a little protein supplement

According to a Pennsylvania State University correspondence course on commercial swine production and live hog marketing 60 sow herds (or larger) with year-round farrowing are needed for a substantial income Year round farrowing has several advantages Buildings and equipment are kept in constant use Full-time labor is employed Marketing is orderly — hogs are sold at regular intervals — and buyers come to rely on a steady supply.

The disadvantages? Feeds are needed in large quantity Diseases come to be constant threats Buildings with environmental control — heat, ventilating, humidity — are needed.

Study the Pennsylvania State University correspondence course to learn the care of swine in large herds Send your name and address with $6 65 to Commercial Swine, Box 5000, University Park, Pa. 16802 There are no other charges and a complete copy comes to you by mail.

A View From The Governor's Office

By Gov. Raymond P. Shafer

This Administration is taking action to prevent and crack down on any fraud or potential fraud in the State's public assistance program.

Last week, I approved establishment of a 20-member field auditing team to travel throughout the State checking on the issuance of public assistance payments.

The major purpose of this team will be to make certain the local county boards of public assistance are issuing checks only to those who qualify. In addition, the Department of Public Welfare has established new procedures to help us guard against fraud in the system.

These new procedures are the result of an investigation into the reasons for the rapid rise in public assistance rolls and charges of fraud in the issuance of emergency public assistance checks in Philadelphia earlier this year

The reforms we are making are part of my Administration's determination to make certain that the integrity of our system is maintained and that the possimility of fraud is eliminated.

On April 7, we called in the certified public accounting firm of Peat, Marwick, Mitchell and Company, in Philadelphia, after statistics showed that emergency fund payments to Philadelphians asking for public assistance increased by 289 percent from June, 1968, to January, 1969.

In addition, we also launched an investigation into the charges of then Auditor General Grace Sloan that more than 800 Philadelphians had received duplicate public assistance payments. She charged fraud existed in hundreds of these cases.

Our investigation into these charges indicates thus far that there are 26 cases in which more than one duplicate payment was made to a recipient However, I am advised there is a strong indication of fraud in many of them.

In addition there were 50 cases in which there was one duplicate payment made to the recipients. In 49 of these cases, restitution was recommended by taking the duplicated amount out of future payments to the recipients. In one case, prosecution has been recommended.

As a result of this investigation several changes already have been made by the Department of Public Welfare to improve the system of issuing all checks.

First: Emergency checks are issued only from the Executive Director's Office of the Philadelphia County Board of Assistance.

Second: A complete register of all checks forwarded to the Treasury Department for mailing to recipients is mailed daily to the Philadelphia County Board of Assistance. This makes it possible for the Board to verify immediately that a check has been mailed to a recipient and prevents claims of non-receipt of assistance.

Third: The firm of Peat, Marwick, Mitchell and Company has recommended 16 ways to improve the methods and procedures of the Philadelphia office, and a team of systems analysts from the Public Welfare Department and the Governor's Office of Administration has been assigned to implement them

The firm also made a review other county board operations throughout the Commonwealth to determine if similar situations exist but discovered none

Success Seen For Fertilizer Industry

A fertilizer industry leader sees a "period of promise" ahead for his industry, but success, he indicates, hinges on attention to better marketing, better business practices and better handling of customer credit.

W. J. Turbeville, President, Agrico Chemical Co., and Vice Chairman, Board of Directors, National Plant Food Institute, spoke this week at the 12th annual Northeast Fertilizer Conference.

He pointed out that fertilizer marketing programs must be oriented more toward customer, less toward products, and added "you can't sell tomorrow's commercial farmer with yesterday's marketing skills." This means, indicated Turbeville, that, more than ever, success or mediocrity of a fertilizer business outlet will center on dependability, knowledge and initiative of the local dealer, not only in selling, but in servicing each account and following up on every sale

Turbeville sees "an expanding realization among industry toward need for better business practices in all areas, from better profit-loss statistics to handling customer credit" NPFI, he indicated, is set to help industry in developing programs to improve business data collection and knowledge of credit use for benefit of both industry and its customers

The annual conference is sponsored by NPFI in cooperation with northeastern land-grant universities

Pennsylvania Tobacco Prospects Improve

Production of Pennsylvania Seedleaf tobacco for 1969 is forecast at 38 0 million pounds, an increase of 1 percent from the August 1 estimate If the current forecast materializes, the crop will be about 1 percent larger than last year's but 16 percent less than the recent 5-year average production.

Yield prospects increased to 1,900 pounds per acre, 100 pounds higher than 1968 and about 110 above average.

Tobacco harvest began as early as the last week of July and nearly all producers began cutting at least two weeks earlier than normal Tobacco leaves were generally large and heavy. Curing weather during mid-August was ideal with low humidity Because of the heavy crop, a lot of good weather will be needed to prevent shed burn.

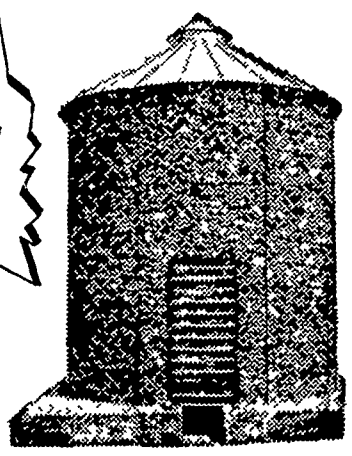
EXCLUSIVE SPEEDY ROOF RAFTERS MAKE SPEEDY CORN CRIBS



Twice as Fast Twice as easy to erect

Speedy roof rafters guarantee easy, proper placement of roof panels the first time. Rafters add great strength to the roof. Panels need only to be bolted together in three places. It's another big time-saving feature you get only in Speedy Bar-Lok corn cribs.

Stands up best—lasts longer
Wire mesh panels are 5-gauge wire — thick as a ¼" bolt! No bulge or sag. Sturdy 26-gauge galvanized roof is securely anchored to 9 steel roof rafters and side panels. Can't blow off!

Come in today and see the Speedy Bar-Lok corn crib. Let us prove to you that Speedy is twice as fast — twice as easy to erect. Let us show you all the other features that make Speedy Bar-Lok your best corn crib buy.

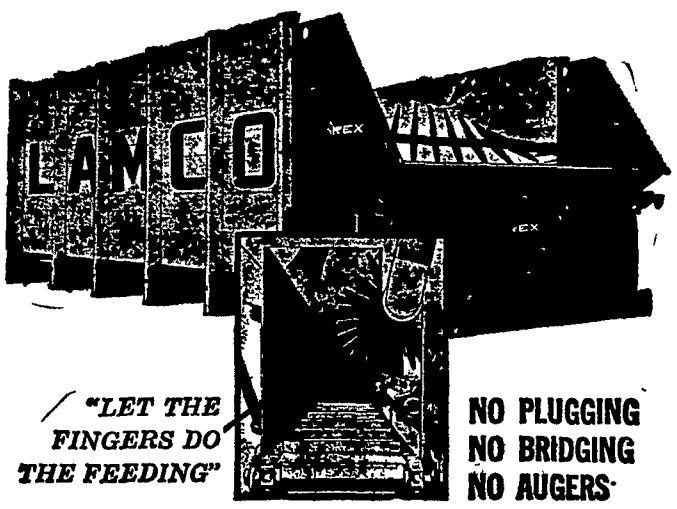
GRUMELLI FARM SERVICE
Quarryville Ph: 786-3630

HERE ARE 6 WAYS WE COULD SKIMP ON THE FAMOUS LAMCO FORAGE BOX

1 Use a Jerky Ratchet instead of SMOOTH WORM DRIVE

2 Replace our Safe Heavy Duty Outfeed Apron with a dangerous auger.

3 Use common beater in place of our Spiral beater which peels off the material. No Bunching — No Plugging



"LET THE FINGERS DO THE FEEDING"

NO PLUGGING
NO BRIDGING
NO AUGERS

4 - Skimp on a Plain open Jaw transmission in place of our Protectively enclosed unit.

5 - Replace our Positive expensive worm drive with open gears on our Lower Beater Drive

6 - Use ordinary soft wood for our main Stringer and Cross pieces instead of Strong Oak.

BUT . . .

We won't skimp — We know how valuable Farmers' time is in the Harvest.

Lamco is Safe — Smooth and Trouble free

International Air Service At Olmsted Would Benefit Farmers

State Agriculture Secretary Leland H Bull believes Harrisburg could become the hub of a world-wide food distribution system if international air service should be added to advantages already available at Olmsted State Airport.

"Studies made by the Pennsylvania Department of Agriculture show that Olmsted is a highly desirable site for a food distributing center to serve markets in the heavily populated Northeast," Secretary Bull said

"It is close to food producing and processing areas," Secretary Bull pointed out, "and is linked to major domestic markets by rapidly expanding air cargo service and a network of rail lines and high-speed highways"

Preparations are now under way to obtain U.S custom and immigration facilities at Olmsted, a step that would open the airport to international service. The move is being spearheaded by the Pennsylvania Aeronautics Commission in cooperation with the Chamber of Commerce of Greater Harrisburg

In endorsing this action, Secretary Bull said the move could have significant economic advantages for Pennsylvania agriculture and the state's four-billion-dollar food industry The Pennsylvania Department of Agriculture, he pointed out, has participated in food trade missions in Europe, Japan and the Caribbean in the past two years and is actively engaged in seeking ways to expand foreign markets for Pennsylvania farm and food products

"I have instructed the directors of our Bureaus of Animal and Plant Industries to contact their counterparts in neighboring states and in the U S Department of Agriculture to determine what would be required at Olmstead This is especially important in dealing with any plant and animal quarantines that may be imposed, he said.

"The importance on international air service to a potential food distribution center at Olmsted cannot be over-emphasized," Secretary Bull declared.

ANTIQUE SALE

Fertilizer

Applying fertilizer at this time of year to stimulate growth on shrubs, trees or roses should not be practiced New growth late in the Fall is likely to become a victim of more severe Winter killing We therefore discourage any fertilizer applications until the plants have become dormant Rose bushes, however, should be sprayed regularly for control of insects and diseases, the stronger the plant as it goes into the Winter, the less the danger of Winter killing. Later in the Fall and just before the ground freezes, it is advisable to place a mound of topsoil around the plants covering the main stem for further protection.
